Promotion du Travail*

Specialized Technician in Software Development
(Technicien Spécialisé en Développement
Informatique).

Projects

• Portfolio

Built with : HTML CSS Bootstrap Javascript

- Customized and redesigned an existing HTML, CSS, Bootstrap, and JavaScript Template to create a unique and personalized portfolio website.
- Modified styles and layout, tailoring the design to reflect personal branding and visual identity.
- Enhanced the user experience by editing and optimizing CSS and Bootstrap components to ensure responsiveness and visual appeal across devices.
- Added custom features and interactive elements while removing unnecessary components to streamline functionality.

• Web Development Agency

Built with : React.js , Formspree(mail api)

- Designed and developed a fully responsive corporate website to enhance online presence and brand identity.
- Created a modern and visually appealing user interface, prioritizing clean navigation and seamless user experience.
- Integrated a contact form powered by the Formspree API, enabling efficient and secure form submissions.

• Hotel booking website Redesign and Development

Built with : Wordpress

- **Template Customization:** Adapted a pre-built WordPress template to align with the branding and needs of a local hotel, significantly improving its online presence.
- **Content Development:** Wrote compelling content, uploaded high-quality visuals, to enhance the website's informativeness and appeal.
- **Responsive Design:** Tailored the website for a seamless experience across all devices, ensuring compatibility with modern standards.
- **System Configuration:** Configured backend features, including room pricing management and availability updates, to maintain accurate and dynamic offerings.
- **Performance Optimization:** Enhanced page speed and security by implementing Cloudflare for CDN, SSL integration, and caching.
